## Experience

### Full Stack Developer

Strive School Gmbh (Feb 2021 - Nov 2021)

- Created multiple React based web applications which were responsive and accessible.
- Created multiple REST APIs using Node.js, Express.js and Mongodb.
- Created clones of Spotify, LinkedIn, Netflix and Whatsapp to get an idea of using my web development skills in real life projects.
- Created an Applicant Tracking System using React, Node.js, Mongodb, Amazon Web Services S3 which can be used by companies to manage their recruitment needs.
- The application can be accessed via - <https://joblify-frontend.vercel.app/>

### INTERN

MIKROBIT Sp. z o.o. (Feb 2020 - Apr 2020)

- As the intern in my task was to refurbish the existing government websites.
- The tasks were to make some changes in the Joomla CMS and to add new features as per the guidelines of the E.U.
- To create new features for the websites like making them responsive and to make the automatic email system by using Php.
- To help the senior developer by doing small tasks like to check the alignments in the website and to check whether the websites are created by following the rules and the guidelines provided by the E.U.

### INTERN

J&C Group Sp. z o.o. (Jan 2019 - Mar 2019)

- Created a responsive website for a legal advisor.
- The website is used for showcasing the services provided by the legal advisor along with information about various laws in Poland.
- Technologies used - Javascript, HTML5, CSS3, Bootstrap 4, Express.js.
- Tools used - VS Code, Ubuntu, Git, Github, Heroku, Balsamiq.

# Personal Projects

- **Applicant Tracking System (ATS)** - Web application that enables the electronic handling of recruitment and hiring needs. This application is custom tailored to the needs of the company. An all in one solution for posting jobs and carrying out their complete recruitment processes.  
Technologies Used -  
Frontend - React , Redux, React-query, React-router, Axios, Typescript, Material Ui, Moment.js.  
Backend- Node.js, Express.js, Multer.js, AWS S3, JsonWebToken, MongoDB, Mongoose.js.  
Link- <https://joblify-frontend.vercel.app/>
- **Github Finder** - Web application which helps people to find any github user and any details associated with their profile such as repositories, contribution, job preferences etc.  
Technologies Used -  
Frontend - React , Context Api, React-router, Axios, JavaScript, Moment.js, Github Api.  
Link- <https://flamboyant-benz-19e28b.netlify.app/>
- **Note Keeper** - Web application which is similar to google notes. It allows users to create, view, update and delete their everyday notes, so that they can organise their work efficiently.  
Technologies Used -  
Frontend - React , Moment.js, HTML 5, CSS 3, Javascript.  
Link- <https://blissful-hopper-8a9a25.netlify.app/>
- **Weather App** - Web application which shows weather forecast with a nice image of the searched city.  
Technologies Used -  
Frontend - HTML 5, CSS 3, Javascript, Fetch Api, Open Weather api.  
Link- <https://elegant-knuth-48e4d8.netlify.app/>

## Conferences

- **Junction X Budapest 2019**  
Hackathon - Participated and tried to solve the TESCO challenge.

## Hobbies & Interests

- Playing snooker
- Cooking
- Social service
